

( Microscopic Urine analysis 1 )

<p><b>Calcium oxalate crystals</b></p> 	<p><b>Uric acid crystals</b></p> 	<p><b>Amorphous urates crystals</b></p> 
<p><b>Cystine crystals</b></p> 	<p><b>Leucine crystals</b></p> 	<p><b>Tyrosine crystals</b></p> 

**Cholesterol crystals**

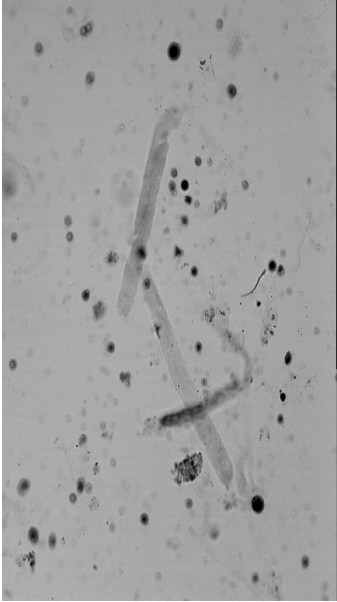

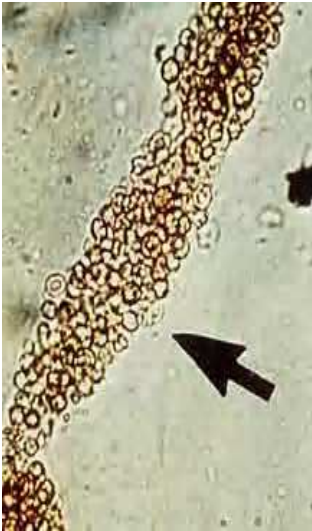

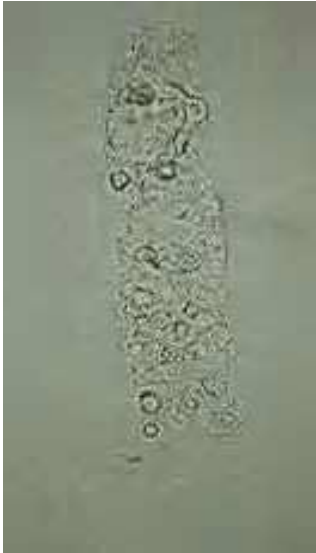

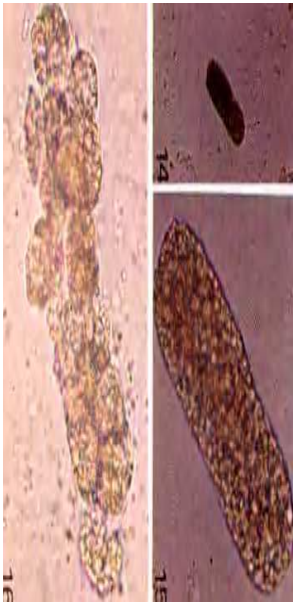

**Sulfonamide crystals**

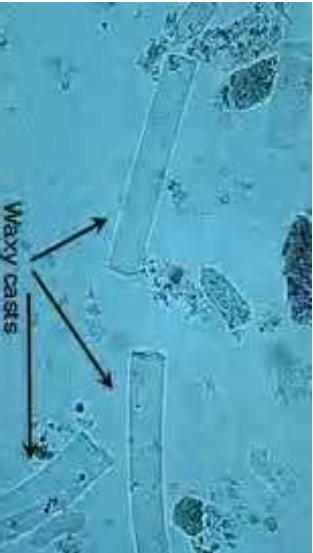

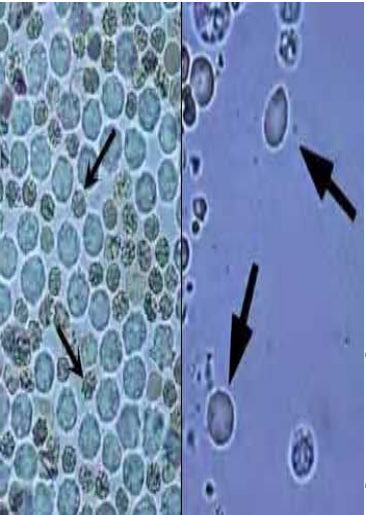

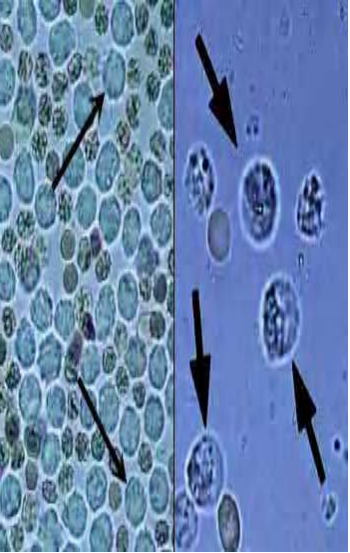

**Triple phosphate crystals**

( Microscopic Urine analysis 2 )

<p>Calcium phosphate crystals</p> 	<p>Calcium carbonate crystals</p> 	<p>Amorphous phosphate crystals</p> 
<p>Hyaline casts</p> 	<p>Granular casts</p> 	<p>Cellular casts</p> 
<p>Epithelial casts</p> 	<p>Fatty casts</p> 	<p>RBC casts</p> 

( Microscopic Urine analysis 3 )

<p><b>WBC casts</b></p>  Microscopic image showing a cluster of white blood cells (leucocytes) within a cast structure, appearing as a dense, irregular mass of cells.	<p><b>Waxy casts</b></p>  Microscopic image showing waxy casts, which are elongated, rectangular structures with a characteristic wavy, layered appearance. Arrows point to these structures, and the text 'WAXY CASTS' is visible in the lower left.	<p><b>Epithelial cells</b></p>  Microscopic image showing several large, polygonal epithelial cells with prominent nuclei and cytoplasm. Arrows labeled 'A' and 'B' point to specific cells.
<p><b>Red blood cells(Erythrocytes)</b></p>  Microscopic image showing red blood cells (erythrocytes) in a urine sample. The image is split into two panels: the left panel shows a dense field of cells, and the right panel shows a few individual cells with arrows pointing to them.	<p><b>White blood cells(Leucocytes)</b></p>  Microscopic image showing white blood cells (leucocytes) in a urine sample. The image is split into two panels: the left panel shows a dense field of cells, and the right panel shows several individual cells with arrows pointing to them.	<p><b>Pus cells</b></p>  Microscopic image showing pus cells, which are white blood cells with a characteristic multi-lobed nucleus, scattered across the field.

**Bacteria**

***Candida albicans***

**Egg of *Shistosoma hematobium***

**( Microscopic Urine analysis 4)**

**Trophozoite of *Trichomonas vaginosa***

**Egg of *Enterobius vermicularis***

**Microfilaria of *Wucheria bancrofti***

Mr. Ammar AL-Turkostani
